

Photography Programs

January-April 2012

Photography-Beginner Digital Photography

Have you just purchased a new digital camera and have no idea what to do? Do you have a digital camera but always keep your settings in auto? What is the flashing light and what is the camera trying to tell you? This class will answer these questions whether you are using a point and shoot or digital photo and shoot. We'll show you how to feel confident with your camera and go beyond the basics. Bring your camera and questions to class. Handouts will be provided. Patrick Day instructs.

\$45.00 Ages 16 and up- January 14-21 Saturdays 10am-12pm

Photography- Intermediate Digital Photography

Have you ever seen a photograph and thought 'how did they do that?' This class teaches you the concepts of making better photographs by understanding theory behind the camera settings. We will explore topics such as proper exposure, depth of field (areas of sharp focus/out of focus), white balance (removing color tinges from photos), cropping and composition. This class is designed to complement the Introduction to Photography, but that class is not a prerequisite. Reference handouts will be provided.

\$45.00 Ages 16 and up -February 11-18 Saturdays 10am-12pm

Photography-Advanced Digital Photography

You understand the basics of photography, now you want to explore new and different techniques. This class will give you an understanding and enough knowledge to create new and creative photographs. We will discuss how to create panoramic, HDR (High Dynamic Range), and macro images. We will also look at action, night, flash, and tripod shooting. Attendees should have a working knowledge of their camera and basic understanding of photographic theory (ISO/Aperture/Time, Depth of Field, etc.). Reference handouts will be provided.

\$45.00 Ages 16 and up -March 3-10 Saturday 10am-12pm

Photography- Taking Your Photography to the Next Level

Learn how to improve your photographic compositions. We will cover basic concepts and camera techniques. We will use examples from classic images over the past century to illustrate. Learn to develop your 'eye' and understand how best to compose your image to get the best shot possible. Instructor will assign homework to bring back to the second class for review. Instructed by Patrick Day. Skillset: Any

\$60 Ages 15 and up- March 31- April 7 Saturdays 12pm-3pm

Photography-Now What-After the Picture

Taking photographs is fun but it is only half of the process. What do you do when you get home and are ready to download the pictures? This course will show you techniques for downloading images; best practices for naming and managing your pictures; and how best to protect your files from computer failures. After you have put the pictures on your computer, now what? PRINTING and SHARING! We'll go over ways to output your images optimally for your printer, a print service (i.e. Costco or WalMart), as well as upload them to your online accounts (i.e. Facebook, Flickr, Picasa, etc.). Patrick Day instructs.

\$25 Ages 15 and up-March 24 Saturday 1pm-3pm

Photography Color Management

This course will cover how to get the most out of your color photographs from capture to print. The first class we'll view concepts of color space and techniques for managing & creating profiles so that the image you print looks like the picture you took. In the second class, we'll discuss different techniques to enhance your images by manipulating colors through selective, HDR, and Black & White. Patrick Day instructs. No camera is needed. Skillset: intermediate (basic camera and PC experience required)

\$60.00 Ages 15 and up-January 28-February 4 Saturdays 10am-12pm
